

Project Timeline

Green Light:

The research and development project was approved to start on 16-01-2023. On this day we were grouped and introduced to our topics.

Kick-off: the group officially begin practical and theoretical research on 23-01-2023. This is the intensive study week.

Sign-off:

this project is designed to be completed on the 18-04-2023. At this, both the theory and practical phase ought to be completed.

Deployment:

One way we ought to make our project none to company is by posting the success on reppu page and also inviting some companies to join us on the day we ought to display our work to the public at campus heart.

Milestone:

Since the project is ongoing; although there are some stages that have been completed, such as the algorithms on which nerd machine will run and the draft of parts to be used in the projects. This completion was on 07-02-2023.

Deliverable:

On 07-02-2023, the algorithm stage and draft Manship of the project was completed.

Quality Gate:

This stage involves some standardization; this standard includes:

- First stage: ned machine most see the work area and work only with this work area.
- Second stage: voice recognition will be inputted into nerd.
- Third stage: nerd must be able to interpret the code given.
- Four stages: all workpieces must be light.

Decision Gate:

The standards in Quality gate are achievable, as some as already been achieved and when the time scheduled for other standard to be achieved comes, it will certainly be achieved. The product of the workpiece was scheduled to be done in 21-02-2023.
